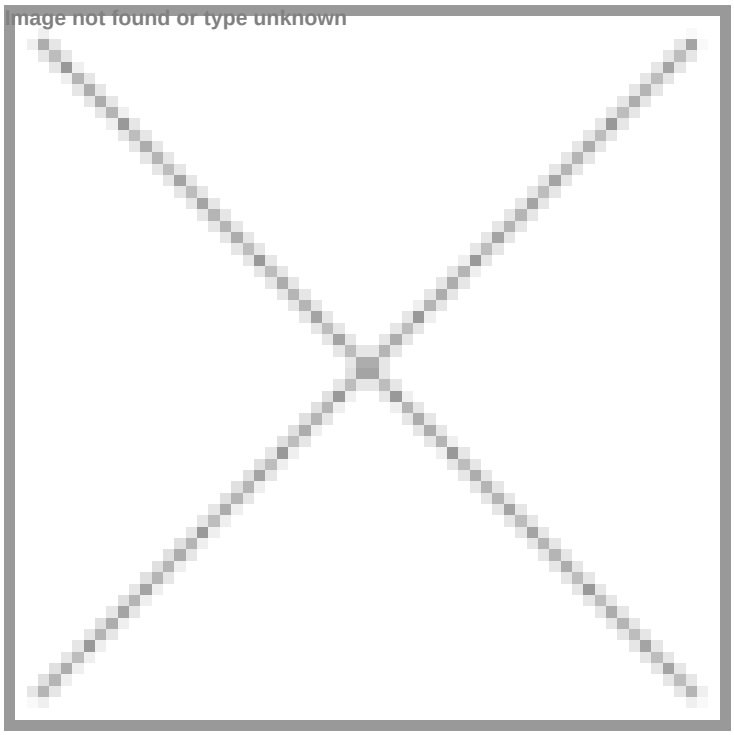
Bio X Cell expands global reach with new distribution centre in China

13 February 2025 | News

The new Beijing distribution centre will enhance service to researchers and institutions across China



Bio X Cell, the world's leading provider of functional antibodies for translational research, is strengthening its global distribution network with the opening of a new distribution centre in Beijing, China.

This expansion marks the latest step in Bio X Cell's growing international presence, complementing its flagship distribution centre in Germany, as well as partnerships that extend the Bio X Cell name to Singapore and Korea, along with its headquarters and manufacturing facility in New Hampshire.

The new Beijing distribution centre will enhance service to researchers and institutions across China by increasing inventory availability to expedite order fulfillment. By establishing a stronger regional presence in APAC, Bio X Cell aims to better support its customers in one of the world's most dynamic and rapidly growing biomedical research markets.

"This new distribution centre underscores our commitment to delivering high-quality functional antibodies to researchers worldwide with greater efficiency and reliability," said Chris Conway, CEO of Bio X Cell. "With increased inventory on hand in Beijing, we can reduce lead times and provide faster access to the essential reagents that fuel groundbreaking scientific discoveries."

The strategic expansion aligns with the Bio X Cell mission to provide researchers with uninterrupted access to premium antibodies while maintaining its reputation for superior quality and customer service. With this addition, Bio X Cell continues to reinforce its role as a trusted global supplier in the life sciences industry.
